

## SECTION 12 93 23 – TRASH AND RECYCLING STANDARD

---

Missouri State University has determined that standardization of trash and recycling containers in public space on our campuses is vital to provide uniformity and a level of expectation for the students, faculty, and staff that we serve. To that end, the following items are to be used on all projects constructed on our campuses. A proprietary specification is in the best interest for our university.

The University standard is to have three separate containers for trash and recycling. Due to volume and weight, the containers shall be sized as specified below. A location in a new or renovated facility shall be identified early in the design process to adequately allow for the inclusion of these items without being placed directly within a corridor. However, an adjacent alcove is acceptable. Sufficient quantities shall be provided to serve the facility and our customers.

### Product Information:

**Manufacturer:** Magnuson Group

**Model:** Valuta

**Body Color:** Dark Anthracite

**Top Color:** Anodized Silver

Description: 40-Gallon **Trash Container** with Internal Rigid Liner

Model Number: VA1818L

Top Opening: Waste

Icon / Location: Landfill / Front

Description: 40-Gallon **Cans/Plastic/Glass Container** with Internal Rigid Liner

Model Number: VA1818L

Top Opening: Cans / Plastic / Glass

Icon / Location: Recycling / Front

Description: 20-Gallon **Paper Recycling Container** with Internal Rigid Liner

Model Number: VA1809L

Top Opening: Paper

Icon / Location: Paper / Front

In addition to the standard listed above, a separate space shall be allocated for a large paper recycling container for use by the faculty and staff. This container, a typical 95-gallon trash container with wheels, shall be placed within a closet or screened location to keep it out of the immediate direct vision of the campus community. These shall be located throughout the facility in sufficient quantities to meet the needs of the facilities. The count of these within a building typically are fewer than the trash/recycling stations identified here. This large paper recycling container will be purchased and installed by the owner upon completion of the construction work.

Deviation from this standard will require prior written approval from the director of Planning, Design & Construction. Any request to deviate from these standards must be submitted in a timely fashion to allow for a thorough review and possible testing of the substitution.
